

Genuine Carrier Bearings

Carrier-supplied vibratory bearings are of the highest quality and the only ones specifically designed and tested to keep Carrier equipment running at peak performance.

Carrier bearings have received the stamp of approval for quality and are designed for durability and compatibility.

Features include:

- Self-aligning
- Cast iron housing
- Exclusive locking pin
- Double set collar for better security — a must for vibratory service.
- Tight fit between the inner race, bearings and outer race, and housing — a must for vibratory service.
- Designed with focus on the industry — seals matched to application.

We offer a full line of products, all designed and manufactured to exacting standards specifically for Carrier equipment.

Look for the Carrier name for quality and assurance of authentic vibratory bearings
