

Material: Meatballs

Capacity: 18,000 PPH
Temperature: Frozen
Fed From: Freezer Belt
Discharges To: Screener

- Conveying pan 72" wide with 24" deep sidewalls fabricated from 304L stainless steel. Pan transitions to a 44" wide discharge.
- All stainless steel construction with product contact welds polished to a 150 grit finish. All exterior welds polished to an 80 grit finish.
- Electrically actuated gate to accumulate product and meter material out. Gate is fabricated from 304L stainless steel. Gate includes a stainless steel hygienic motor and drive.
- Carrier's patented Delta Phase Drive® allows the ability to control the speed and angle of vibration while maintaining the stroke. This allows the product to accumulate and spread throughout the pan while using a vertical angle of attack, as well as feeding forward at a controlled rate.
